Article Info	ABSTRACT
<p>Article History: Received: 26th Sep 2025 Accepted: 10th Oct 2025 Published: 25th Oct 2025</p>	<p>The present study evaluates the overall health status of Solapur City with special reference to the facilities, services, and challenges within the Civil Hospital system. Health, as defined by the World Health Organization (WHO), encompasses physical, mental, and social well-being. The research uses both field survey data and secondary sources to analyze the biological, demographic, social, and cultural indicators of health among the urban population. Major health issues identified include orthopedic disorders, stomach ailments, women's health complications, malaria, cancer, and HIV, along with their preventive measures. The study also highlights the vital role of social workers in promoting health education, awareness, and social responsibility. It concludes that the Civil Hospital of Solapur plays a significant role in delivering quality healthcare but requires further improvements in resources, awareness programs, and social participation.</p>

INTRODUCTION

The health status of the population is an important accepts of well being. Good health is necessary for effective a participation in economic and social activities. Health care facilities have brought on the achieved health status as measured by various indicators. An assessment of the adequacy of these facilities in terms of number of hospital, dispensaries, doctors and others medical staff is relevant in a study of human development. The 8th plan envies the provision of health care facility to all. By the end of the plan, accordingly an integrated health care system has evolved in the states. A network of community Health Center (HCs), Primary Health Centre (PHCs) and sub centers have been built in rural area to provide health care facility. According to the World Health Organization (WHO) health is defined as a state of complete physical, mental and social being and not merely the absence of disease or infinity.

The primary data has been collected which is based on field work. Various statistical like Average, Percentage, correlation etc., technical methods has been analyzing at that time. The analyzed data has been shown using relational maps and diagrams.

Health Definition

WHO (World Health Organization)
